

MGTDEV-188: Project Management

Course Description:

Learners will explore the role of projects and the importance of project management in business environments. Learners will create and develop successful proposals. They will also plan, schedule, and budget for a project. Interpersonal skills such as team leadership and communication will be practiced as the learner completes the final project. Learner will use Microsoft Project software to assist them in monitoring the progress of the project. This includes the use and application of Gantt Charts, Program Evaluation and Review Technique (PERT), and Critical Path Method (CPM). Culmination of this course will include a professional presentation of your project with expected outcomes.

*To apply for CPLE -Students need to provide a professional portfolio that demonstrates:

- Effective team leadership
- Successful completion of a work related project management
- Effective utilization of project management software
- Written explanation of project management work experience
